FRAME RURAL AGENCIES

Livestock & Property Agents

Frame Rural Agencies was established in 2009 and is proudly 100% locally owned and operated. Our team has 30 years of practical experience in the rural industry and have developed an expertise in all facets of livestock and property sales and marketing. We have offices in Inverell NSW & Blackall QLD and we service a vast area from the Northern West Slopes and Plains of NSW right through to North West Outback QLD and everywhere in-between. We also buy and sell weekly at the Inverell and Blackall Saleyards. At Frame Rural Agencies we pride ourselves in providing a reliable, friendly and professional service to all our clients, whether they are buying or selling!

MEAT & LIVESTOCK AUSTRALIA

WELCOME

Welcome to the 17th Kurra-Wirra Annual Northern Bull Sale

This year's sale marks our 17th annual bull sale, and it comes at the end of a tough run. We're coming out the other side of drought, and our cows and calves did it hard early on — this draft of bulls were weaned earlier than usual and into containment. But the way they've bounced back since has genuinely impressed us. What has been pleasing to see is that many of our clients have had mostly above average seasons capitalising on some solid prices.

The Slick coat gene is continuing to prove its worth. Heat stress starts affecting cattle at around 28 degrees and 60 per cent humidity. Coat colour helps delay the onset, but the real advantage comes from the slick coat gene itself. At Kurra-Wirra, we believe we're leading the industry in actively testing for this gene across our herd — in fact, we're the first in Australia, and quite possibly the world, to have cattle that are classified as pure Angus in the Angus Performance Register (APR) carrying the slick coat gene. To qualify for APR registration, cattle must be more than seven-eighths (87.5%) Angus.

We began testing for the gene eight years ago, and because it's dominant, we've been able to steadily lift our Angus content and performance while holding on to the slick coat advantage. The benefits keep stacking up — improved heat tolerance, better parasite tolerance, faster finishing times, and highly marketable product over any cow.

Growth drives turnover, and turnover drives profit. Getting calves on the ground and off the farm sooner frees up more grass — whether that's going back onto the cows to lift fertility, or into trade stock and other profit-driving enterprises. Our bulls are bred to get calves off your place faster than most, and the Angus content behind them makes those calves easier to sell when the time comes — buyers actively seek out Angus-cross calves, and they command a premium.

There's an environmental dividend as well. Heat-stressed cattle eat less but burn around 15 per cent more energy just maintaining themselves — so keeping cattle comfortable through the slick coat gene protects that feed efficiency. And efficiency is directly tied to methane: the faster an animal grows and the sooner it leaves the farm, the less methane it produces over its lifetime. Fewer days to turn-off means a smaller footprint per kilo of beef — better for your bottom line, and better for the environment.

Our bulls are drawn from an 700-strong cow herd, run under genuinely tough conditions so their genetics are properly tested before they ever reach the catalogue. We put real weight on temperament, sound structure and consistent performance — the traits that matter once a bull is working in someone else's paddock, not just standing in a sale pen.

Every bull we offer has been through a full fertility examination — full morphology, palpation of reproductive organs, inspection for warts and abnormalities, and scrotal circumference measurement. Our thanks go to Ced Wise Breeding Services for carrying out this work with his usual care and expertise.

We'd also like to thank James Lilburne for his continued support of the Kurra-Wirra program — a partnership now well into its third decade — and Beau Frame and the team at Frame Rural for their support throughout the year's. Thanks also to Matt Sowden at Five Star Creative Promotions for producing this year's bull videos, which will be up on Stocklive ahead of sale day and James Dickson at Dickson Ag, for their continued sponsorship and support on sale day.

Thank you for your continued interest in Kurra-Wirra genetics and hope to see you in Blackall on 28th September. If you have any questions about the bulls or would like to inspect them before the sale, please don't hesitate to get in touch.

Regards,

Simon, Robert, and the Close Family

SALE INFORMATION

Sale information Inspection

All bulls will be available for inspection by prospective purchasers from 8.00am sale day.

Location/Time

Sale to be held at the Blackall Saleyards on Monday 28th September 2026, commencing at 11am

Rebate

A 3% rebate will be offered to outside agents introducing buyers and settling within 7 days of the invoice. Agents wishing to nominate buyers must do so by email/phone to James Lilburne or the selling agent 24 hour prior to the sale.

Selling System

Sale of animals will be conducted under Open Cry Auction terms and conditions, and interfaced sequentially online with Stocklive. Please ensure to register with the selling agents and/or StockLive to obtain a buyers number if you are considering making a purchase. Successful purchasers are requested to give written advice to the selling agents regarding transport arrangements at the conclusion of the sale.

Stocklive Auction

Buyers will have the option of bidding off site, or on site using StockLive if they wish. Note this will be sale by video auction - sequentially sold from lot 1 through to 127. All lots will have photos and/or video uploaded to StockLive by mid September. Please register your trading details with StockLive prior to sale day. Download the Stocklive App onto your smart phone or tablet. You are ready to bid.

Payment Options

Settling of accounts will be facilitated by the selling agents. Payment options include payment by cheque, EFT or credit card on day of purchase, or within normal trading terms.

Fertility

Every sale bull has passed a thorough fertility examination. This assessment includes a full crush side semen motility test, palpation of the reproductive organs which includes inspection of penis for warts and abnormalities. Scrotal circumference is also measured. These examinations were conducted by Paul Kenny – Paul Kenny Cattle Breeding Services Pty Ltd.

Guarantee

Kurra-Wirra guarantees the structural soundness and fertility of all bulls sold. The guarantee is that if a bull should prove to be infertile or breaks down, for reasons other than injury, misadventure, disease, mismanagement or negligence, the vendor will provide you with a satisfactory replacement, if available, or issue a credit equal to the purchase price minus the salvage value. The credit may be used to purchase an animal at a future Kurra-Wirra Sale. Contact James Lilburne for further information.

Health of Bulls

All bulls have been semen tested and had a thorough fertility examination. All bulls have had the following vaccinations:

- 7-1
- Vibrovax
- Pestguard
- Botulism
- BEF (3-day Sickness)
- Tick Fever (Blooded)

Supplementary Sheet: Supplementary sheets will be provided by individual vendors on the day of the sale.

GST

GST will be added on to the purchase price of the bull at the conclusion of the sale.

Sale Day Safety

All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances. However, there are inherent risks associated with cattle handling.

PLEASE NOTE: ENTER THE CATTLE PENS AT YOUR OWN RISK

UNDERSTANDING COAT COLOUR & SLICK GENE INHERITANCE

Making Genetics Work for You

At Kurra-Wirra, we're committed to producing profitable, functional bulls backed by science and real-world results. Understanding how the **coat colour** and **slick gene** are passed to progeny helps you make informed breeding decisions.

Both traits offer real-world advantages — especially in northern environments where heat, humidity, and parasites challenge productivity. Cattle with the **slick coat gene** shed heat more efficiently, often showing improved fertility, higher weight gains, and reduced stress under extreme conditions. Likewise, **red-coated cattle** tend to reflect sunlight better than black-coated animals, making them more suited to tropical and arid environments. Together, these traits offer a genetic advantage that delivers real dollars in harsh country.

Coat Colour Inheritance – Red vs Black

When it comes to coat colour, black tends to dominate — but what matters most is whether the bull or cow carries the **red gene (e).** Below is a practical guide to what calves you can expect based on the genetic makeup of both sire and dam.

Bull Genotype	Bull Colour	Cow Genotype	Cow Colour	Progeny Outcome
EE (no red gene)	Black	ee (red gene)	Red	100% Black (Ee) — all carry red gene
Ee (carries red)	Black	ee (red gene)	Red	50% Black (Ee), 50% Red (ee)
ee (red gene)	Red	ee (red gene)	Red	100% Red (ee)
ee (red gene)	Red	Ee (carries red)	Black	50% Red (ee), 50% Black (Ee)
Ee (carries red)	Black	Ee (carries red)	Black	25% Red (ee), 50% Black (Ee), 25% Black (EE)
EE (no red gene)	Black	EE (no red gene)	Black	100% Black (EE) — no red gene carried

Note: Only bulls with two red genes (ee) will guarantee red calves. Bulls that carry one red gene (Ee) can still produce red calves when mated to a red or red-carrier cow.

Slick Coat Gene Inheritance

The Slick gene improves heat tolerance, coat type, and tropical adaptability. It's dominant, meaning only one copy is needed to show the trait.

- Homozygous Slick means the animal carries two copies of the slick gene — and will always pass it on.
- Heterozygous Slick means the animal carries one copy of the slick gene — and has a 50% chance of passing it on.
- Non-Slick animals carry no slick gene and will not pass the trait on.

Below is a practical guide to what you can expect based on the type of bull and cow used.

Bull Type	Cow Type	Progeny Outcome
Homozygous Slick	Non-Slick	100% Hetero Slick calves
Heterozygous Slick	Non-Slick	50% Hetero Slick, 50% Non-Slick calves
Homozygous Slick	Heterozygous Slick	50% Homo Slick, 50% Hetero Slick calves
Heterozygous Slick	Heterozygous Slick	25% Homo Slick, 50% Hetero Slick, 25% Non-Slick calves
Homozygous Slick	Homozygous Slick	100% Homo Slick calves
Non-Slick	Non-Slick	100% Non-Slick calves

Bringing It Together in Your Herd

Kurra-Wirra bulls are DNA-tested for both colour and slick coat status. This means:

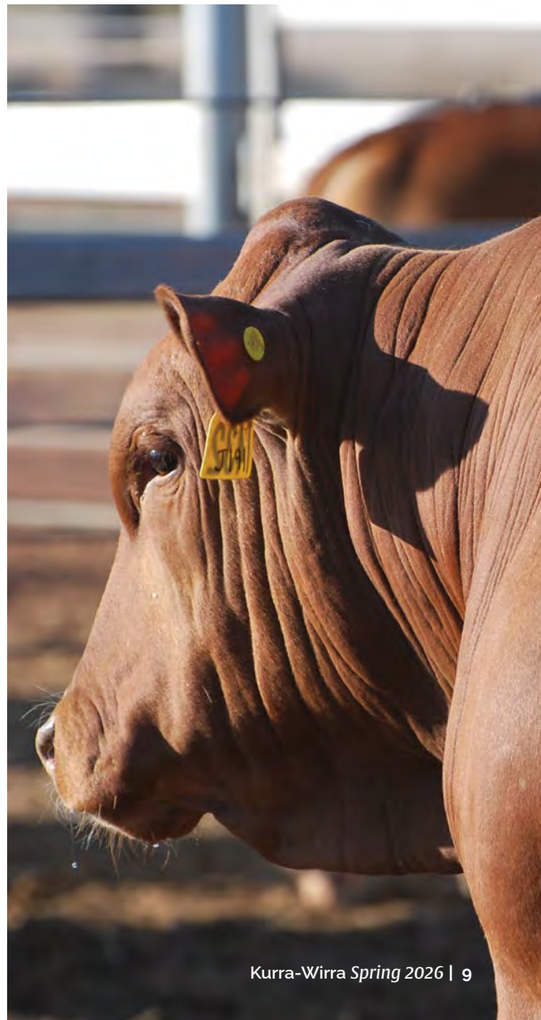

- You can confidently plan colour outcomes (red or black)
- You can build a more heat-adapted, efficient cow herd with slick genetics

The benefits of the slick coat gene go beyond just appearance. Cattle begin experiencing heat stress at just 28°C, especially when humidity rises above 60%. Heat-stressed cattle eat less and burn up to 15% more energy just to maintain themselves — meaning slower growth, reduced fertility, and lower productivity.

Cattle with the slick gene maintain lower rumen temperatures, sweat more efficiently, and continue grazing for longer each day compared to non-slick animals. That extra grazing time means more weight gain, better feed conversion, and ultimately, earlier finishing and improved fertility.

In northern Australia, the combination of red coat and slick gene gives producers a critical advantage. Our clients are seeing progeny thrive in tropical conditions — gaining well in paddocks and feedlots alike, with reduced tick burden and greater resilience.

By selecting for the slick gene, Kurra-Wirra has developed a high-performance animal that can walk the country, handle the heat, and deliver more kilos off grass, faster. It's all about heat tolerance, feed efficiency, and building cattle that not only survive — but excel — in tough northern environments. for both colour and slick coat status.

AUSTRALIA'S $PROFIT INDEX

The unique $Profit breeding value ranking system, not only compares all breeds equally, but compares hybrid composite multi breed animals as well.

What makes this $Profit selection even more unique is, in addition to the standard traits such as birth, weaning weights and carcase assessments which are revenue traits, it also looks at feed efficiency and cow maintenance; which can impact costs significantly. The biggest improvement is its balance; it recognises the benefits of hybrid vigour in a breeding system, and does not assume "more is better". Traits are not linear, and realising this and that more is not better is an important component of this index.

We will continue to work with ABRI for Breedplan Analysis EBVs on the pure bred registered animals, and now can also offer an additional selection tool, $Profit Index.

To deliver positive outcomes to livestock producers, and in particular being able to offer our customers the best available global genetics, providing a $Profit Index is the perfect tool. By linking our herd in, and comparing them to 1.4 million plus animals currently on the system, buyers can be confident we are comparing apples with apples.

Explanation for across breed EBVs (ABE)

Across Breed EBVs are published for all the Slick Angus bulls in this catalogue. These Across Breed EBVs predict differences expected in performance of future progeny of these bulls. All the Across Breed EBVs can be used to compare the Slick Angus within this catalogue.

Gestation Length (GL)
The length of pregnancy in days. Shorter gestation length can reduce calving difficulties and improve reproductive efficiency.

Birth Weight (BW)
The average weight of is the weight of progeny at birth, expressed in kg.

Weaning Weight (WW)
The weight of progeny at weaning, expressed in kg.

Yearling Weight (YW)
Weight of progeny at 12 months of age, reflecting growth potential beyond weaning.

Back Fat (BF)
Is the ultrasound based ABE for back fat in mm.

Rib Eye Area (RE)
Is the ultrasound based ABE for rib eye area, expressed in cm squared.

Marbling (MB)
Is the ultrasound based ABE for marbling.

Milk (MK)
This is the best indicator of a bull's daughter ability to milk. It measures the difference in weaning weight between bulls' progeny solely due to milk.

Carcase Weight (CW)
is the expected progeny differences in bulls progeny for carcase weight, expressed in kgs.

Mature Weight (MW)
is the predicted mature weight of daughters. This ABE is the best indicator of daughter size.

Feed Gain (FG)
Predicts feed efficiency by measuring the amount of feed needed for weight gain. Lower values mean better efficiency.

Intake (IN)
Estimates the total feed consumed by progeny over a standard feeding period. Lower intake can reduce feeding costs.

Scrotal (SC)
Is calculated from the circumference of the bulls' scrotum.

Fertility (FERT)
An overall fertility index predicting reproductive performance and conception rates in daughters over her lifetime.

ABOUT THE COWS - KW BREEDING PROGRAM

Kurra-Wirra bulls are bred from a 700 strong head cow herd, run under tough commercial conditions. We do this to apply pressure on each cow and to test the capacity of her genetic traits so the 'cream can rise to the top'. This allows only the most profitable genetics to remain within the herd. Females are subject to a rigorous selection process. Culling of females is strict and done under these conditions:

- Cows MUST get in calf each year: No exceptions,
- Heifer must calve unassisted at 2 years of age,
- Temperament must be favourable. We allow the cow to be protective of calf but any hint of madness, she's gone!
- Conformation and structure are measured and culled upon before entry into the stud,
- Must pass on strong genetics in relation to birth weight, growth rates and carcass traits.

Our selection criteria are first and foremost focused on type and structure, and then on above average genetic performance - never in reverse. We AI a significant number of females to proven sires from the best Angus and Red Angus bulls into our herd. This is to ensure we deliver the most commercially relevant and most profitable bulls to the industry. Our primary focus is consistently centred on breeding market-oriented bulls that not only elevate the beef industry but also improve the profitability for our clients.

BIEBER JUMPSTART J137

Bieber Jumpstart J137 has been a game-changer in the Kurra-Wirra Red Angus and Slick Angus program. Known for his exceptional calving ease, strong maternal traits, and consistent carcass quality, Jumpstart's genetics have helped us breed bulls and females that combine fertility, growth, and structural soundness. His influence is evident across our herd, driving improvements in performance and temperament. A cornerstone sire that continues to elevate the quality and reliability of our breeding program.

Kurra-Wirra Sebastian S385

Without question the most important homozygous slick sire we've bred. His progeny have consistently topped past sales, and a number of them are now retained and working in the stud themselves. A tall, thick, agile and square bull — the hallmark of the Kurra-Wirra type. S385 passed away recently. RIP, old fella.

Kurra-Wirra Tactic T27

T27 is a bull we bred from LSF SRR CONTROL, a sire we have had great success with out of H20, who was a really special cow we brought out of a Red Angus dispersal in 2022. T27 is a super thick, deep sire who has been a great balance over some taller cows to moderate them and add some fat cover. His fat, fertility and birthweight data is exceptional. Also, kept sons for stud use.

Paringa Red Double Decker T28

Purchased for $20,000 in the Paringa sale, T28 is an above-average performer across the vast majority of his figures. By Dunoon Double Up Q201 and out of Paringa Red Declaration Q74, he carries elite Angus pedigree through the Rennylea and Dunoon lines on his sire's side. A thick, good-footed bull — Leg Angle sits in the top 17% and Foot Angle just inside the better half of the breed — he backs that up with standout figures for 200 Day Growth (top 14%) and Carcase Weight (top 10%), plus easy-calving numbers across the board.

BREEDING FOR BETTER – SLICK ANGUS

Our Slick Angus program taps into the finest global genetics of the Angus and Red Angus breeds combined with the Senepol slick coat gene. This initiative delivers high-quality, performance-tested animals with considerable genetic advantages. Featuring sire verification and genomically enhanced Estimated Breeding Values (EBVs) through the Leachman $Profit analysis, we rigorously assess key traits such as growth, birth weight, fertility, carcass quality, and conformation, ensuring a consistently exceptional standard across our herd.

OPENING UP MARKETS
Our cattle not only fetch Angus premium prices and are suitable for northern exports but also experience high demand in feedlots and store markets throughout Australia, with progeny commanding a flat-backed premium crossed with Bos Indicus cows.

SUPERIOR FERTILITY
High libido with the ability to breed in diverse and often challenging environments, combined with high conception rates, ensuring a reliable and efficient production system.

EARLY MATURITY
Reach maturity quicker than many other breeds. This early maturity allows for earlier breeding and shorter generation intervals, enhancing productivity reaching target weights at a younger age.

MEAT QUALITY
Premium price cuts that exhibit tenderness, texture, flavour, marbling and meat yield.

REDUCTION IN HEAT STRESS
Our cattle maintain a lower internal body temperature, minimising the impact of heat stress in temperatures exceeding 28 degrees. This trait contributes to enhanced fertility and increased production. [1]

TICK & PARASITE RESISTANCE
Estimated on-farm cost of ticks to the Australian cattle industry (production losses plus control costs) is approximately $146m per year. Slick Angus is a tick resistant breed – an efficient method to control this parasite. [2]

MORE GRAZING TIME DURING DAYLIGHT
A higher degree of heat tolerance allows for longer average daily grazing time when compared to other non-slick coated breeds resulting in improved production and performance.

HOW TO REGISTER with

STOCKLIVE ELITE

Follow these easy steps to start bidding:

- Visit www.stocklive.com.au using your desktop, laptop, iPad, iPhone or Android device. NO App required.
- Select the **bid** icon beside the sale you wish to bid on.
- If you're new, select **register**, and complete the form with all your details, **accept sale conditions,** select **create bidder registration.**
- You will receive an email from StockLive. Select **"Confirm my bidding account"** to set your password and **accept** Bidder Account Terms & Conditions and Privacy Policy followed by **create my account.**
- Congratulations! Your StockLive account has been created and your bid request is pending. You will be notified via email when your request to bid has been approved.
- Existing users, follow steps 1 & 2, select login, enter your details followed by the **request to bid** icon beside the sale you wish to bid on and then **accept** the terms.
- On Sale Day, follow steps 1 & 2, select **enter auction** to watch, listen and purchase when the sale is flashing **LIVE**.
- Invoicing and delivery will be carried out as per your registration details by the respective Selling Agents.

Understanding the TransTasman Angus Cattle Evaluation (TACE)

TACE
TransTasman Angus Cattle Evaluation

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

Notes What a great way to start the sale - V329 is a square, thick, heterozygous slick-coated sire by Kurra-Wirra Oracle T178, who was a thick set, typical Brown Oracle's son. His dam M179 is out of the Caribbean family who's been a staple cow family that has been tried and tested for over two decades with great results every time. He backs it up with figures — milk in the top 5%, and scrotal size in the top 5%. One to consider for herds after maternal strength and fertility, with the added heat tolerance and adaptability that the slick coat provides.

Notes Vinnie has a lot going for him. He's super deep and thick with a great balance of data. His sire T28 is a super thick set bull we brought on to the farm. The data set is great – Moderate calving ease with well above average growth data. He has a great foundation which is suited to a lot o programs that want to soften their cattle down to increase marketing option.

Notes A heterozygous slick-coated Red Slick Angus son of Paringa Red Double Deck T28, a top Red Angus bull we bought for $20,000 back in 2024, V519 brings 78.5% Angus content out of a Shadow Boxer-bred dam. He traces his sire line back to Dunoon Double Up which was a top Black Angus with the Red Gene. Again, high Angus content with performance and the slick gene – what we are after! He backs it up with figures — gestation length in the top 1%, a low Birth Weight (top 6%), eye muscle area in the top 22%, and yearling weight in the top 22%. A genuine option for producers chasing growth, carcase and fertility, with the slick coat.

Notes V271 is a moderate thick Red Angus type, similar to his sire Kurra-Wirra Thor T53 who was a Low birth, high growth and great carcass Red Angus bull we bred. Was the highest indexing Red Angus bull on the Angus database for a long while. He has got the added bonus of an Oracle-bred dam. Two elite Red Angus from both sides of the pedigree tree. Performance-wise he ranks scrotal size in the top 16%, carcase weight in the top 17%, marbling in the top 19%, and the $Feeder index in the top 21%.

Notes V530 is a heterozygous slick-coated Red Slick Angus bull carrying 93.5% Angus content, sired by Kurra-Wirra Thor T53. He is out of an Oracle-bred dam. Performance-wise he ranks scrotal size in the top 1%, carcase weight in the top 1%, milk in the top 6%, and eye muscle area in the top 10%. A genuine option for producers chasing growth, carcase and fertility, with the slick gene delivering heat tolerance, parasite tolerance and faster finishing. Very rare to have a bull with such high Angus content with the slick gene.
